PREDICTIONS

APPS

Platform Fatigue

To get the full match-day experience, a fan must juggle, a fantasy app, a sports news app for in-depth stats, and mainstream social media to engage in banter.

Absence of Integrated Platform

There is no dedicated place where fans can make live predictions, simulate points-table scenarios, and compete in casual gamification while simultaneously reacting to the live action with their peers.

Missing Dedicated Community

There is no centralized, interactive ecosystem built exclusively for the nuances of cricket fandom

MONETIZATION STRATEGY

Possible revenue streams	Priority	Rationale
Premium Features	High	Fans love to flex their custom badges on profile. It allows super-fans to support us without paywalling core features.
Advanced Simulations	Maybe	Paywalling data might push users back to free sites like ESPNcricinfo. It will work only if the simulations are uniquely proprietary and highly demanded
Premium Tier: "The Captain's Pass"	Low	Features: 1. Create up to 3 Private Custom Servers. 2. Unlock Tournament-Long Polls & Prediction Markets. 3. Custom Server Branding (Upload your own server logo and banners).
